Marilyn- WORKING WITH 3 FAMILIES - PAPILIONIDAE, PIPERIDAE, NYMPHALIDAE

Here are additions of butterflies identified at the station. Please add them to the list (chart) you already have. We could pass on these names to Tom?

*Papilio cressphontes* or *thoas* (this needs to be confirmed, because there is an overlap of identifying marks as given in the identification key)

*Caligo illioneus oregon* (note however that color brightness not quite like plate)

*Morpho peleides limpida* (not quite exactly like plate, mix between 6 and 2 on plate 38)

*Tigris aesta* (but more vibrant than plate?)

*Adelpha celerio*

*Phoebis trite*

*Phoebis sennae* (closest to this one, need to catch another)

*Anartia fatima*

*Dione juno*

*Aeria eurimedia agna*

*Heliconius ismenius telchinia*
